

Common Numbers Of Two Sorted Arrays(Array version)

```
1 class Solution(object):
2     def common(self, A, B):
3         """
4         input: int[] A, int[] B
5         return: Integer[]
6         """
7         # write your solution here
8         if not A or not B:
9             return []
10        left = right = 0
11        result = []
12        while left < len(A) and right < len(right):
13            if A[left] < B[right]:
14                left += 1
15            elif A[left] > B[right]:
16                right += 1
17            else:
18                num = A[left]
19                result.append(num)
20                left += 1
21                right += 1
22        return result
```
