

Remove Certain Characters

```
1 class Solution(object):
2     def remove(self, input, t):
3         """
4         input: string input, string t
5         return: string
6         """
7         # write your solution here
8         to_remove = set(t)
9         result = []
10        for letter in input:
11            if letter not in to_remove:
12                result.append(letter)
13        return "".join(result)
```
