

Remove Adjacent Repeated Characters I

```
1 class Solution(object):
2     def deDup(self, input):
3         """
4         input: string input
5         return: string
6         """
7         # write your solution here
8         result = ''
9         for letter in input:
10             if len(result) == 0 or result[-1] != letter:
11                 result += letter
12         return result
```
